

ASSIGNMENT

Implement a search function for the below endpoints

1. <https://jsonplaceholder.typicode.com/users>

filter the function using user's:

- email
- name
- company name
- zipcode
- street address
- geo lat
- geo lng
- city

2. <https://dummyjson.com/users>

filter the function using user's:

- email
- bank cardnumber
- address
- postcode
- state
- company name
- company address
- company coordinates (i.e lat and lng)
- hair color and type
- phone

3. Using axios with get method, consider you were given an API endpoint as <https://dummyjson.com/products> display the data for the products with the below th:

- title
- brand
- category
- price
- return policy
- warranty information
- reviewers list name and email
- images

- i. Change the background color for each of the products <td> based on category whereby

Groceries = orange color with black text color

Beauty = purple color with white text color

Fragrance = whine color with white text color

Furniture = black with white text color
